

GATES TRANSPORT LABEL SPECIFICATION

February 15, 2013

INTRODUCTION

This standard describes the requirements of two common Gates supplier transport labels (GTL) used on unit loads. It is the responsibility of the supplier to provide labels that meet the requirements of this standard. Noncompliance with these requirements will be the suppliers responsibility.

Each Label type (not each part number) must be certified as meeting the Gates requirements for format and print quality by the certifying agency:

Aalstec Data Corp.
3865 Malden Rd, Windsor, ON, Canada
519-969-7790
www.Aalstec.com

Suppliers SHALL have their labels recertified every 18 months or as requested by Gates operations.

LABEL CONCEPTS

This standard identifies how and where data is to be placed on the following label types:

- Individual Container Label - with a single part number. (4" x 6.5", 102mm x 165mm)
- Master Label - Used on a master container or pallet holding one or more containers of a single part number. (4" x 6.5", 102mm x 165mm)

All human readable fields SHALL be all upper case and Sans Serif. (without tails) i.e. Arial, Helvetica supporting slashed zeroes.

All Block titles shall be 6pt. (0.1", 1.5mm)

Bar codes SHALL be PDF417 (Correction level 3-5) - 2D Bar Code.

Labels SHALL be printed with black characters on white background. (Colored paper nor colored ink allowed)

Labels SHALL be affixed as outlined in GATES Supplier Packaging Manual. (MAN2100)

Note: Illustrated labels are not to scale and are for reference only.

CHANGES AND REVISIONS

Revision	History
0	Separated Barcode Label Standard from Gates Packaging Manual, added Lot Number and Engineering Level to part number.
1	Added Purchase Order Number to Master Label
AALS-001	Modified Document for ease of use. Modified Label Layouts for ease of use. Removed Small Container Label option. Combined Master and Container specifications.

2D BAR CODE DATA STRUCTURE

The sequence (order) in which data is encoded in the 2D bar code is not significant. For more details refer to AIAG B14.

Record separators [RS], Group separators [GS] and End of Transmission [EOT] are special non-printing characters. Refer to the table below for the correct hexadecimal and decimal values for the characters.

Data identifiers are marked in **Blue**.

ASCII/ISO 646 Character	Decimal	Hexadecimal
[RS]	30	1E
[GS]	29	1D
[EOT]	04	04
